

NEW!

AT-100

PERSONAL HIGH-TEMPERATURE ALERTING SYSTEM

- Be aware of temperatures around you.
- Know when temperatures exceed safe levels.
- Vibration alarms notify you.
- Multi-Colour LEDs notify others.
- Auto-data logging records exposures.
- Attaches to your helmet.
- Completely automatic.
- Auto-on / Auto-off / Auto-record.
- Uses AA disposable batteries.
- Small, lightweight, robust, low cost.

The new AT-100 from DMS enhances your awareness of high temperature risk exposure during compartment firefighting and other operations. It attaches to firefighter helmets via standard torch mount.

Users set multiple temperature threshold points at the station. Then, when each temperature threshold is reached, the AT-100 alerts the firefighter via vibration. It also alerts fellow firefighters via green, yellow, and red smoke penetrating LED lights.

Data logging and analytics provide post incident exposure data to assist in health monitoring and occupational health management.
